

# What's the difference?

## Server-based

## Cloud-based

Data is hosted on a physical server at your location. You are responsible for back-ups and recovery.

HOSTING

Data is hosted on the cloud with built-in backup and recovery. No IT maintenance required.

You must schedule the time to update your software manually which may require additional IT assistance.

UPDATES

We manage and regularly update your software automatically outside of regular business hours.

You can only access your data when connected to a workstation or computer at your practice.

ACCESS

Increased flexibility to provide patient care and securely access data via a web browser anytime, anywhere, on any device.

Data back-ups and security are your responsibility and may result in extra IT expenses.

DATA SECURITY

We handle all back-ups and data security to protect you against ransomware and cyberattacks.

Practice website is available for an additional cost.

PATIENT ENGAGEMENT

Integrated online scheduling and a practice website is included.

Upfront capital investment for hardware and potential expenses to keep your equipment up to date.

FINANCIAL INVESTMENT

Lower upfront costs and a monthly subscription. There are no contracts or maintenance and cancellation fees.

Significant re-investment may be needed to update servers and workstations as security and government regulations change.

SYSTEM REQUIREMENTS

Minimal re-investment is needed to keep your devices up to date as security and government regulations change.

For more than 20 years, Eyefinity® has kept innovating and creating solutions that simplify the complexities of your day-to-day practice operations. Building off the success of OfficeMate® and ExamWRITER®, we have leveraged the most secure and advanced technology to create our industry-leading cloud-based software, Eyefinity Practice Management and Eyefinity EHR.
